

MODEL TW5W SPLITTER, HEADSETS, CIRCUIT CARDS

RTS SYSTEMS

SYSTEM ACCESSORIES

MODEL TW5W SPLITTER

The TW5W is a completely passive 1 x 5 connector splitter assembly that can be used to split a single incoming line into five separate outgoing lines. It features a rugged steel alloy case finished in a light gray enamel paint and measures 1.7" H x 6.0" W x 3.6" D. The input connector is an XLR-type 3-pin female and the five output connectors are XLR-type 3-pin males.

HEADSETS

As an adjunct to a TW Intercom User Station, a headset or handset of almost any configuration can be used. This includes low-impedance dynamic or carbon microphones, amplified dynamic or electret microphones, and low- to high-impedance headphones.

All headsets and handsets are prewired with the appropriate mating connector and are fully tested. The Beyer headsets sold by RTS Systems are equipped with 50 ohm receivers, 150 ohm microphones. Setcom headsets are standard equipped with 300 ohm receivers, 150 ohm microphones.
