Xenon Multi-Format Routers

Xenon brings many advanced new capabilities to the world of routing switchers, building on a new generation design that starts with a solid, multi-format router core.

▶Xenon: Excel Beyond Expectations

In today's broadcast environment, a router must be reliable, resilient and cost effective. Xenon excels in all of these areas while offering the flexibility of multiformat operation, and the ability to add Signal Processing Technology.

Great care has been taken in the design of Xenon to avoid single points of failure. Active assemblies are all hot swappable from the front of the frame. Power, control, cooling and reference generation are available in redundant configurations.

Configuration

Xenon allows any mix of formats within a frame in independent blocks of 32 inputs or outputs. Any of the supported formats, 3G/HD/SD/AES, can be expanded to fill an entire 128x128 frame.

The Xenon is housed in a 4RU frame, switching up to 64 sources to 64 destinations, or in an 8RU frame switching up to 128 sources to 128 destinations. Additional input and output modules can be installed in to the router at anytime.

Contro

The Xenon router includes, as standard, an internal Frame Controller module which supports four Q-Link ports, two Ethernet ports and two Serial ports mounted on the rear of the router.

The Xenon has a number of control options, they are:

Remote Control Panel: Any panel(s) from the entire range of Quartz remote control panels can be used with the Xenon router connected via Q-Link.

External third party control: The Xenon router can be remotely controlled via an external third party control device, such as an automation system, when connected to the router's serial port.

Expansior

The input and output stages of the Xenon can be expanded in steps of 32 at any time by adding additional I/O modules. The Xenon can not be expanded beyond its frame size.

Power Supply

The power supplies for the Xenon are internal. The 4RU & 8RU frame can be fitted with an optional redundant power supply with separate AC power inlet & alarm output.

Designed for Performance Ultra Wide Band Routing

By offering a format independent data path, the EQX supports signals from 3Mb/s all the way up to 3Gb/s including SD-SDI, HD-SDI, DVB-ASI, SMPTE 310M digital video formats as well as optical formats and other high data rate signals. In addition to this the EQX supports four independent timing planes which provides independent SMPTE compliant switching for up to four different digital video signal formats.

Video

Xenon supports 3G, HD, SD and ASI video routing. It is available as 3G/HD/SD or HD/SD or SD only, offering cost savings for those who do not require 3G and or HD capability. For those applications requiring the signal to be reclocked, reclocking modules can be added in blocks of 8 outputs.

Audio

Xenon supports AES Audio routing. Balanced AES or unbalanced AES on BNCs are supported in any mixture in blocks of 32 inputs or outputs. AES routing within the Xenon is performed as mono channels so signals can be shuffled amongst AES pairs. Xenon also supports Analog audio I/O. the audio is converted and routed as digital so that analog sources can route to AES destinations and AES sources can route to analog destinations. Analog blocks are in groups of 32 stereo pairs.

Signal and System Monitoring

Xenon supports SNMP signal monitoring and comprehensive system monitoring, including power supply voltages, interior temperatures and fan speeds. System status may also be monitored remotely by a network based remote connection over TCP/IP or a direct serial connection to a PC. User-configurable closing contacts are also provided for connection to an external alarm system.

Feature Summary

- Multiple signal formats within a single frame
- Optional output reclocking in blocks of 8 outputs
- All outputs can switch in one TV frame
- · Dual reference inputs
- Advanced audio features including Soft Switching
- Dolby-E[™] signal compatible
- · Redundant internal controllers
- Q-Link, Ethernet and RS485 control interfaces
- Deterministic switching
- · SNMP and system monitoring
- Powerful and intuitive WinSetup Software

Xenon Multi-Format Routers

▶ Specifications

Configuration:

Selectable in blocks of 32 Outputs: Selectable in blocks of 32

Standard Definition:

SD Video Inputs:

SMPTE 259M 1997, ASI DVB standard Signals supported:

Signal Level: 800mV p-p nominal Impedance: 75Ω terminating Return Loss:

5 - 270MHz 15dB typical Cable equalization: Belden 8281 BBC PSF1/2: 250m min BBC PSF1/3: 150m min

BNC per IEC 61169-8 Annex A

SD Video Outputs:

Signal Level: 800mV p-p ±10% Impedance: 75Ω terminating Return Loss:

15dB typical 5 - 270MHz DC Offset:

BNC per IEC 61169-8 Annex A Connectors:

Signal Path:

Rise/fall times: < 0.4ns Path Length: 12ns, typical

Output jitter: 0.2 UI p-p with < 250m input cable

High Definition: **HD Video Inputs:**

Signals supported: SMPTE 292M Signal Level 800mV p-p nominal 75Ω terminating Impedance:
